## SECTION 10: Stability and reactivity

## Reactivity

This chemical may be sensitive to prolonged exposure to air. (NTP, 1992). Insoluble in water.

## Chemical stability

no data available

## Possibility of hazardous reactions

A nitrated benzamide. Organic amides/imides react with azo and diazo compounds to generate toxic gases. Flammable gases are formed by the reaction of organic amides/imides with strong reducing agents. Amides are very weak bases (weaker than water). Imides are less basic yet and in fact react with strong bases to form salts. That is, they can react as acids. Mixing amides with dehydrating agents such as P<sub>2</sub>O<sub>5</sub> or SOCl<sub>2</sub> generates the corresponding nitrile. The combustion of these compounds generates mixed oxides of nitrogen (NO<sub>x</sub>).
